

Full Power Panel

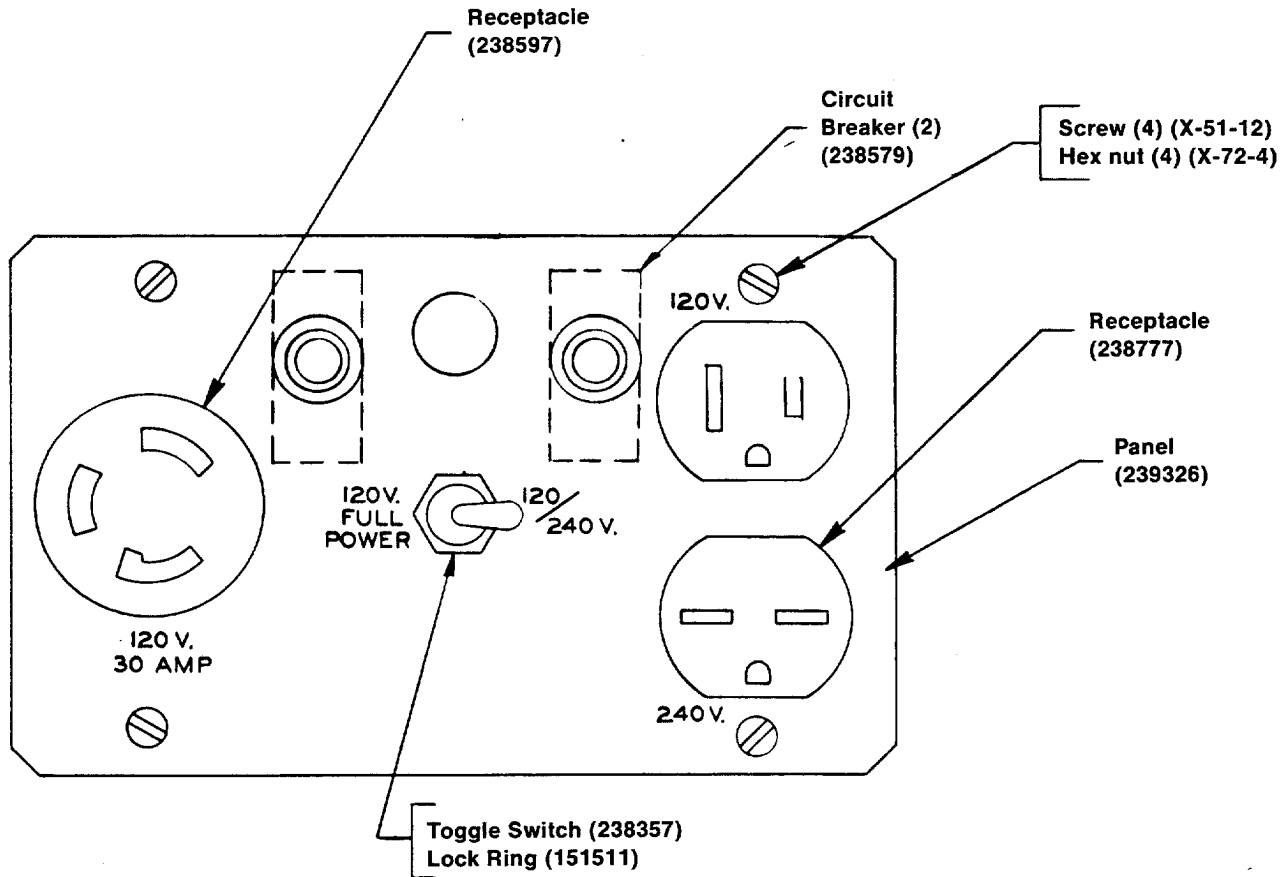

Kit No. PAA-239323

Installation of the full power panel provides full power at 120 volts through one 30 amp receptacle, or 120/240 volts through two 15 ampere receptacles. These panels can be installed on 60 hertz models only.

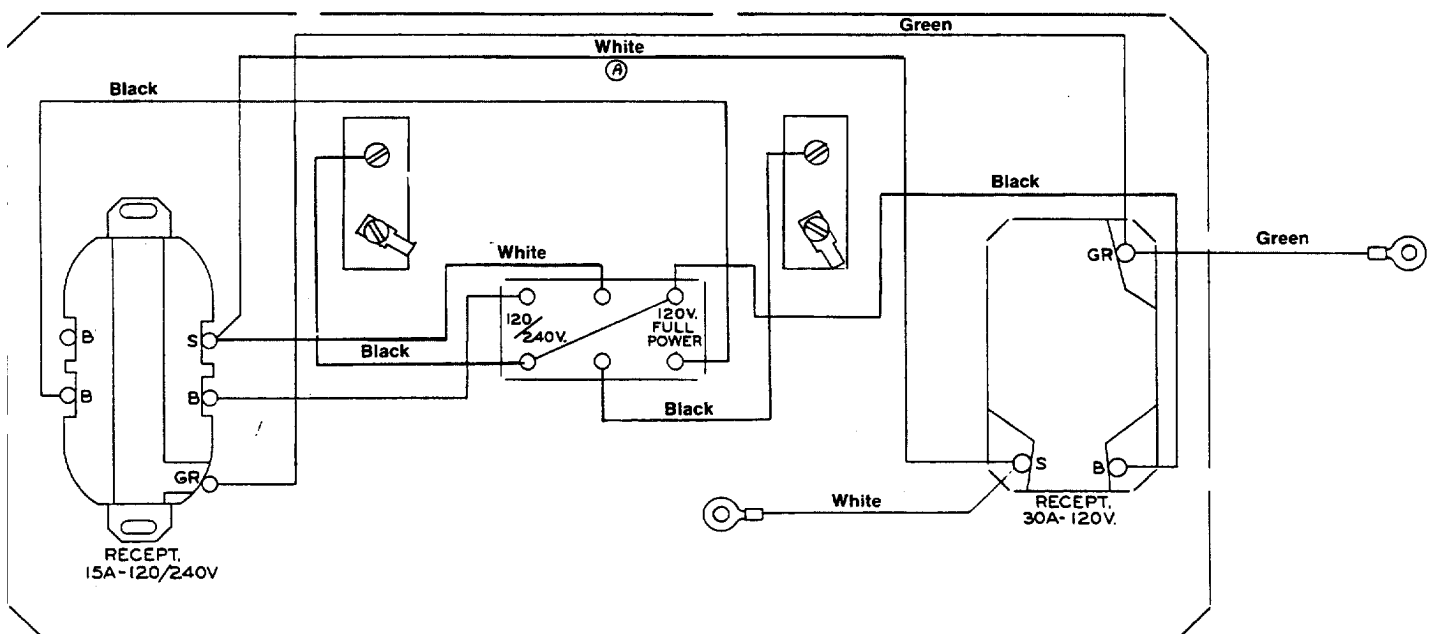

To Install

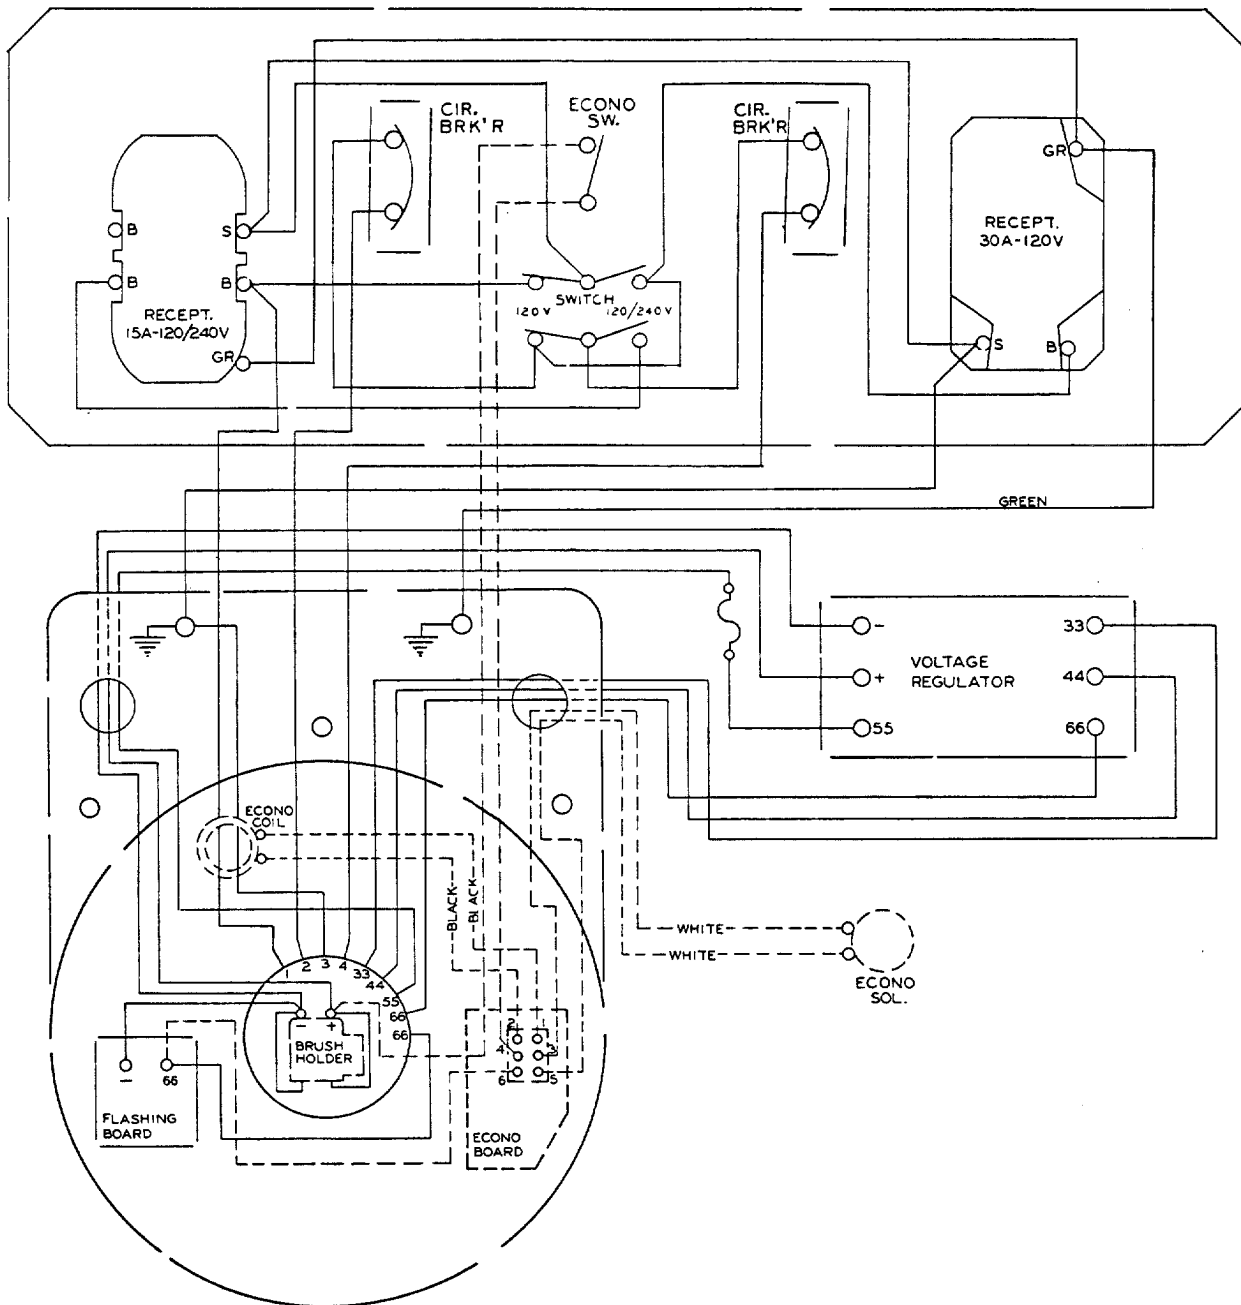

1. Remove the four receptacle panel mounting screws. Save hardware.
2. Pull out receptacle panel and disconnect stator leads 1, 2, and 4.
3. Remove green wire from center boss in end bracket.
4. On 120/240 volt sets remove the white neutral wire from boss in upper left hand corner of end bracket. Save hardware.
5. Connect stator leads 1, 2, and 4 to new panel.
6. Connect white wire from 30 amp receptacle and stator lead number 3 to boss in upper left-hand corner of end bracket. Use retained hardware.
7. Connect green wire from 30 amp receptacle to center boss in end bracket with retained hardware.
8. Position new panel, making sure leads are clear of the rotor.
9. Mount panel to end bracket with original hardware.
